CME PRETEST AND OBJECTIVES

The activity in this journal has been planned and implemented in accordance with the Essential Areas and Policies of the Accreditation Council for Continuing Medical Education (ACCME). Articles are selected for CME credit designation on the basis of our assessment of the needs of readers of The Journal of Clinical Psychiatry, with the purpose of providing readers with a curriculum of CME articles on a variety of topics throughout each volume. There are no prerequisites for participating in this activity.

To obtain credit, please study the designated articles and complete the Posttest and Registration Form.

CME Objectives
After studying the articles by Ramaekers and Brodaty et al., participants should be able to:

• Prescribe antidepressant therapy with appropriate cautions to the patient for either dosing at night or avoiding driving if the drug or drug combination may cause somnolence.
• Describe the use of different models of care for nursing home residents with dementia complicated by depression or psychosis.

Accreditation Statement
Physicians Postgraduate Press, Inc. is accredited by the ACCME to provide continuing medical education for physicians.

Credit Designation
Physicians Postgraduate Press, Inc. designates this educational activity for up to 2 hours of Category I credit toward the AMA Physician’s Recognition Award. Each participant should claim only those hours of credit that he/she actually spent in the educational activity.

Date of Original Release/Review
This educational activity is eligible for CME credit through January 31, 2004. The latest review of this material was November 2002.

This pretest is designed to facilitate your study of the material.

1. Conventional laboratory tests of psychomotor function and cognition:
   a. Are only moderately related to the standard on-the-road driving test
   b. Have the same predictive validity as the standard driving test
   c. Have a better construct validity than the standard driving test
   d. Have no relation to actual driving

2. Psychogeriatric case management and general practitioner consultation are types of intervention models that can be compared with standard care in nursing homes.
   a. True
   b. False

Pretest answers and Posttest on page 103.
